

fits through any standard-sized door.

FungoMan®
Quality
Details

The developers of FungoMan® understand that more convenience is a big plus when it comes to freeing a coach to teach players the skills they'll need to compete effectively.

The FM-150 Automated Baseball Practice Machine was developed to suit the needs of professional, college, high school and youth leagues where every minute of practice is important.

No more coaching from behind the machine. FungoMan keeps you in the game and allows coaches the freedom to communicate and instruct, simulate previously played games, have multiple players included in one drill or create their own drills and situations specific to their team's needs.

The driving force at FungoMan is meticulous attention to product innovation based on modern coaching needs.

For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient, portable, and advanced baseball practice machine available.

Leading-edge technology has been introduced to control the motion and speed of the throwing head. A revolutionary ball-feeding system ensures perfectly placed baseballs that can fire every three seconds with speeds over 100 mph.

Zero-defect manufacturing processes at FungoMan, Inc. demand intensive employee training and comprehensive product testing procedures, rigorous rating standards, and an overall commitment to quality. These corporate values have built a reputation for exceptionally flexible, effective and innovative products for coaches and players as well.

FungoMan's Automated
Baseball Practice Machine's
Portability Offers Coaches
and Players Ease of Use.

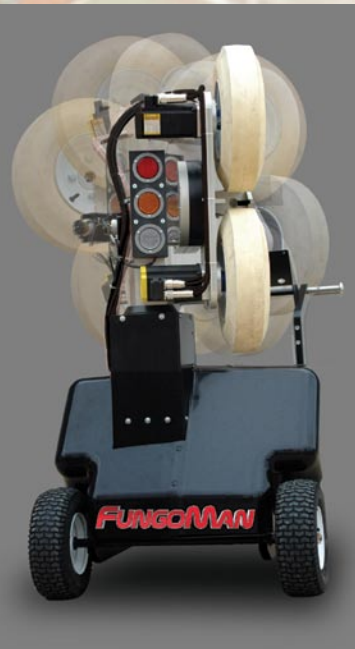

FungoMan's® portable practice machine

is lightweight and simple to move to the practice area.

A perfect idea: an automated baseball practice machine that is easy to handle and is operated by an ingenious programmable software system. For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient and portable automated practice machine seen in baseball.

The FM-150 features a 300-ball capacity with speeds over 100 mph. Leading-edge technology has been introduced to control the motion and speed of the throwing head, along with control advances in the exclusive

FungoMan ball-feeding system, to ensure perfectly placed baseballs that fire every three seconds with distances over 450 ft.

Utilities: Easy to use with fingertip control.

Ease of use and convenience are a big deal to every coach and player, so FungoMan made sure that every FM-150 is easily portable and fits through any standard-sized door. FungoMan is lightweight and features large tires that allow for easy rolling in any practice setting. More interesting is the 300-ball capacity that each FM-150 provides enabling coaches

to easily move right into another drill quickly without reloading balls and moving the machine around.

FungoMan understands that the more convenient it is to coach, the more enjoyable each practice experience will be for the players. The FungoMan FM-150 was developed to suit the unique needs of both coaches and players, where every minute of practicing and duplicating a game environment is important.

The heart of the product is the "Coach-Friendly" Windows® operating system.

The FungoMan FM-150 includes a color touchscreen

pocket pc with wireless remote-control capabilities. The fielding and pitching modes offer an unlimited number of balls per routine (limited only by

storage disk capacity).

The unique capabilities of the FM-150 feature programmable routines that allow the user to quickly call up previously designed practice drills. Better yet, the board memory card has upgradable storage capacity.

The bottom line: Creating optimal practices benefits both coaches and players. Ground balls, fly balls, line drives with varying top spin or backspin can now be positioned on the field wherever a coach desires.

FungoMan Quality Spotlight

Mike Brumley, Texas Rangers' Minor League Coordinator

"A machine like this could be worth its weight in gold."

When FungoMan's Romy Cucjen originally contacted the Texas Rangers about the new FM-150, he was given 10 minutes to prove the benefit of FungoMan

to a professional baseball team. Mike Brumley, the Texas Rangers' Minor League Coordinator, was uncertain as to what this "contraption" might do.

A 45-minute live demonstration at Ameritrust Field in Arlington, home of the Texas Rangers' changed Brumley's mind. "There are no limits as to what you can use FungoMan for," Brumley said. Cucjen challenged Brumley to put the machine to a test. Brumley positioned eight players and programmed the machine for pop-fliers. Brumley said "The machine proved that a fungo hitter can't duplicate fly-balls in the short amount of time FungoMan did. The machine duplicated the same fly-ball for eight players in 10 seconds; it amazed me."

The Texas Rangers agreed after the initial field test that FungoMan also would have tremendous benefits for colleges where staff is limited and practice time is at a premium. Of course, Brumley agrees there's always a place for fungoes, but because of the FM-150's exact placement and ease of use, it's hard to deny that the FungoMan will change the way coaches conduct practice.
