

makes it easy to coach from the field.

FungoMan®
Quality
Details

The developers of FungoMan® understand that more convenience is a big plus when it comes to freeing a coach to teach players the skills they'll need to compete effectively.

The FM-150 Automated Baseball Practice Machine was developed to suit the needs of professional, college, high school and youth leagues where every minute of practice is important.

No more coaching from behind the machine. FungoMan keeps you in the game and allows coaches the freedom to communicate and instruct, simulate previously played games, have multiple players included in one drill or create their own drills and situations specific to their team's needs.

The driving force at FungoMan is meticulous attention to product innovation based on modern coaching needs.

For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient, portable, and advanced baseball practice machine available.

Leading-edge technology has been introduced to control the motion and speed of the throwing head. A revolutionary ball-feeding system ensures perfectly placed baseballs that can fire every three seconds with speeds over 100 mph.

Zero-defect manufacturing processes at FungoMan, Inc. demand intensive employee training and comprehensive product testing procedures, rigorous rating standards, and an overall commitment to quality. These corporate values have built a reputation for exceptionally flexible, effective and innovative products for coaches and players as well.

FungoMan's Ingenious
Wireless Remote Control
and Fully Programmable
Baseball Practice Machine
for Coaches and Players.

FungoMan's® Wireless Remote Control

is the perfect way for coaches to instruct and communicate, instead of hitting balls.

A perfect idea: an automated baseball practice machine that is easy to handle and is operated by an ingenious programmable software system. For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient and portable automated practice machine seen in baseball.

The FM-150 features a 300-ball capacity with speeds over 100 mph. Leading-edge technology has been introduced to control the motion and speed of the throwing head, along with control advances in the exclusive FungoMan ball-feeding system, to ensure perfectly placed baseballs that fire every three seconds with distances over 450 ft.

We start with big league engineering, hardware and software.

The key to creating a superior, automated machine goes far beyond loading baseballs into a machine, flipping a switch and waiting for something to happen.

balls in two programmable modes. The patented HMI control system coordinates all aspects of the machine, including wireless remote control capability from up to 400 feet.

The heart of the product is the "Coach-Friendly" Windows® operating system.

The FungoMan FM-150 includes a color touchscreen pocket pc with wireless remote-control capabilities. The fielding and pitching modes offer an unlimited number

of balls per routine (limited only by storage disk capacity). The unique capabilities of the FM-150 feature programmable routines that allow the user to quickly call up previously designed practice drills. Better yet, the board memory card has upgradable storage capacity.

The bottom line: Creating optimal practices benefits both coaches and players.

Ground balls, fly balls, line drives with varying top spin or backspin can now be positioned on the field wherever a coach desires.

FungoMan Quality Spotlight

"FungoMan allows any coach to avoid standing there hitting fungoes. The real success is found when you're next to the players talking to them." *

Spending day after day hitting grounders. "Let's get one!" And around the horn you go. "Turn Two!" And back around again. Over and over and over and over...

"I do this for living. I hit fungoes," says Steve Smith, the Rangers' third base and infielders' coach. "And, I can hit a fungo. But I've seen high school and college coaches where they're popping one up or hitting one over there. It's ugly."

"We use the FM-150 in some cool ways," says Smith. "Balls to the warning track, balls in the gaps, relay drills, base-running drills. We're able to program the machine to do a lot of innovative stuff."

"The machine is exact," says Smith. "You know, hitting a pop-up exactly where you want to isn't easy. I'll hit a pop-up, but I can't tell you it's going to drop right where I want. This gave us a true pop-up and allowed the drill to be done right."
