FungoMan®
Quality
Details

The developers of FungoMan® understand that more convenience is a big plus when it comes to freeing a coach to teach players the skills they'll need to compete effectively.

The FM-150 Automated Baseball Practice Machine was developed to suit the needs of professional, college, high school and youth leagues where every minute of practice is important.

No more coaching from behind the machine, or searching for a way to avoid popping a ball up or hitting one over there. FungoMan keeps you in the game and allows coaches the freedom to communicate and instruct, simulate previously played games, have multiple players included in one drill or create their own drills and situations specific to their team's needs.

The driving force at FungoMan is meticulous attention to product innovation based on modern coaching needs.

For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient, portable, and advanced baseball practice machine available.

Leading-edge technology has been introduced to control the motion and speed of the throwing head. A revolutionary ball-feeding system ensures perfectly placed baseballs that can fire every three seconds with speeds over 100 mph.

Zero-defect manufacturing processes at FungoMan, Inc. demand intensive employee training and comprehensive product testing procedures, rigorous rating standards, and an overall commitment to quality. These corporate values have built a reputation for exceptionally flexible, effective and innovative products for coaches and players as well.

Conditions Players and
Runs Scripted Practices.**

FungoMan's® versatile practice machine

is perfect when coaches want to create drills specific to team needs.

A perfect idea: an automated baseball practice machine that is easy to handle and is operated by an ingenious programmable software system. For more than four years, engineers at FungoMan, Inc. have researched and developed the most efficient and portable automated practice machine seen in baseball.

The FM-150 features a 300-ball capacity with speeds over 100 mph. Leading-edge technology has been introduced to control the motion and speed of the throwing head, along with control advances in the exclusive FungoMan ball-feeding system, to ensure perfectly placed baseballs that fire every three seconds with distances over 450 ft.

Baseball's most advanced and versatile practice machine.

There's a good reason why the FungoMan FM-150 Automated Practice Machine is destined to be the choice for any coach and player.

Whether a coach needs to teach the fundamentals of base running, provide drills featuring balls in gaps, soft toss or conditioning each player – the FungoMan FM-150 allows for repetitive routines, or specific balls in two fully programmable modes.

The ingenious FungoMan design is carefully balanced for players and coaches to use the machine by themselves, or can be programmed to accommodate up to eight players with pinpoint accuracy for repetitive drills. The machine's uses are endless, and the versatility is exceptional. The result of this effort is a practice machine that embodies the best of all worlds: a solid concept, precise fabrication, convenience and safety.

The heart of the product is the "Coach-Friendly" Windows® operating system.

The FungoMan FM-150 includes a color touchscreen pocket pc with wireless remote-control capabilities. The fielding and pitching modes offer an unlimited number of balls per

routine (limited only by storage disk capacity).

The unique capabilities of the FM-150 feature programmable routines that allow the user to quickly call up previously designed practice drills. Better yet, the board memory card has upgradable storage capacity.

The bottom line: Creating optimal practices benefits both coaches and players.

Ground balls, fly balls, line drives with varying top spin or backspin can now be positioned on the field wherever a coach desires.

FungoMan Quality Spotlight

Don Wakamatsu, Texas Rangers' Bench Coach

"FungoMan offers coaches at every level the ability to build a rock-solid foundation for their players."

Romy Cucjen, FungoMan's president, knew he had developed a product that would be beneficial to

baseball coaches and players at every level. This is where Cucjen's teammate from Arizona State, Don Wakamatsu, was first contacted to "test" the machine at the Texas Rangers' stadium in Arlington, Texas.

"Romy and I had stayed in contact over the years, and I knew that he was on to something," Wakamatsu said.

"The machine sounded promising, but I had absolutely no idea of what to expect. I gave him 10 minutes to demo the machine and the ground crew ended up kicking us off the field 45 minutes later."

Wakamatsu was convinced that the machine offered benefits that had not been seen in an automated practice machine and invited Cucjen to the Rangers' instructional facility. This is where the equipment received a thumbs up from coaches and players.

The Rangers' staff created innovative ways to use the machine. Balls to the warming track, balls in the gaps, relay drills, and base-running drills. Wakamatsu joked, "It looks like we may have lost a fungo hitter and will probably gain an electrician. Coaching must come first and FungoMan will be a great help for everyone."
